MEDIAN HOUSEHOLD INCOME IN THE PAST 12 MONTHS (IN 2012 INFLATION-ADJUSTED DOLLARS)

Universe: Households

2012 American Community Survey 1-Year Estimates

Note: This is a modified view of the original table.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

		Median household income in the past 12 months (in 2012 inflation-adjusted dollars)
Alabama	Estimate	41,574
Alaska	Estimate	67,712
Arizona	Estimate	47,826
Arkansas	Estimate	40,112
California	Estimate	58,328
Colorado	Estimate	56,765
Connecticut	Estimate	67,276
Delaware	Estimate	58,415
District of Columbia	Estimate	66,583
Florida	Estimate	45,040
Georgia	Estimate	47,209
Hawaii	Estimate	66,259
Idaho	Estimate	45,489
Illinois	Estimate	55,137
Indiana	Estimate	46,974
Iowa	Estimate	50,957
Kansas	Estimate	50,241
Kentucky	Estimate	41,724
Kentucky	Margin of Error	+/-419
Louisiana	Estimate	42,944
Maine	Estimate	46,709
Maryland	Estimate	71,122
Massachusetts	Estimate	65,339
Michigan	Estimate	46,859
Minnesota	Estimate	58,906
Mississippi	Estimate	37,095
Missouri	Estimate	45,321
Montana	Estimate	45,076
Nebraska	Estimate	50,723
Nevada	Estimate	49,760

		Median household income in the past 12 months (in 2012 inflation-adjusted dollars)
New Hampshire	Estimate	63,280
New Jersey	Estimate	69,667
New Mexico	Estimate	42,558
New York	Estimate	56,448
North Carolina	Estimate	45,150
North Dakota	Estimate	53,585
Ohio	Estimate	46,829
Oklahoma	Estimate	44,312
Oregon	Estimate	49,161
Pennsylvania	Estimate	51,230
Rhode Island	Estimate	54,554
South Carolina	Estimate	43,107
South Dakota	Estimate	48,362
Tennessee	Estimate	42,764
Texas	Estimate	50,740
Utah	Estimate	57,049
Vermont	Estimate	52,977
Virginia	Estimate	61,741
Washington	Estimate	57,573
West Virginia	Estimate	40,196
Wisconsin	Estimate	51,059
Wyoming	Estimate	54,901
Puerto Rico	Estimate	19,429

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2012 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012 American Community Survey

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-|' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '|+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***|' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.
